

ASIL ZAIN T A

Frontend / Full Stack Developer

 Email: asilzai02@gmail.com |  Phone: +91 7871247661

 Portfolio: <https://asilzain02.github.io/My-Portfolio/>

GitHub: <https://github.com/asilzain02>

Professional Summary

Passionate and innovative web and software developer with hands-on experience in building responsive, interactive, and AI-powered applications. Proficient in modern web technologies and mobile app development. Adept at problem-solving and delivering projects that blend creativity with functionality.

Technical Skills

Programming Languages: JavaScript, TypeScript, Python, C/C++, Java

Web Development: HTML5, CSS3, React.js, Express.js, Tailwind CSS

Mobile & IoT: Flutter, Arduino, Firebase, ESP32

Tools & Platforms: Git, GitHub, VS Code, Figma

Other: API Integration, UI/UX Principles, AI/ML Basics

Projects

1. AstroEdge AI

- Developed an AI-powered system for real-time astronomical data analysis and edge computing applications.
- Tech Used: Python, AI/ML algorithms, Data Processing Libraries
- Achieved accurate predictions and insights for astronomical datasets.

2. Spam Email Detection

- Built a machine learning model to classify emails as spam or not spam using NLP techniques.
- Tech Used: Python, Scikit-learn, NLP, Data Preprocessing
- Enhanced email security by achieving high detection accuracy.

3. Text Summarization System

- Created an AI-based tool to summarize large text documents efficiently.
- Tech Used: Python, NLP, Transformers
- Reduced reading time while preserving key content and context.

4. Face Recognition System

- Implemented a real-time facial recognition system for security and authentication purposes.
- Tech Used: Python, OpenCV, Deep Learning Models
- Enabled accurate and fast identification for multiple individuals.

5. Hand Gesture Recognition System

- Developed a system to detect and interpret hand gestures for human-computer interaction.
- Tech Used: Python, OpenCV, Machine Learning
- Applications include gesture-based controls for devices and presentations.

6. AI-Based WiFi Naming Trap Detector

- Built an AI system to detect fake or malicious WiFi networks to prevent cybersecurity threats.
- Tech Used: Python, Machine Learning, Data Analysis
- Improved network security awareness and protection from phishing attacks.

Education

SSLC – Adarsh Higher Secondary Matriculation School, 2020

HSC – Adarsh Higher Secondary Matriculation School, 2022

Master of Technology in Software Engineering (Integrated) – VIT University, 2027

Achievements / Awards

- Successfully deployed multiple full-stack and IoT projects, including AI-integrated solutions.
- Built and maintained an interactive online portfolio to showcase professional projects.

Additional Info

- Strong interest in AI, ML and web development.
- Open to internship or full-time opportunities in web/app development, AI applications.
